Mei:CogSci at ELTE

Our students can choose to join the MeiCogSci programme.

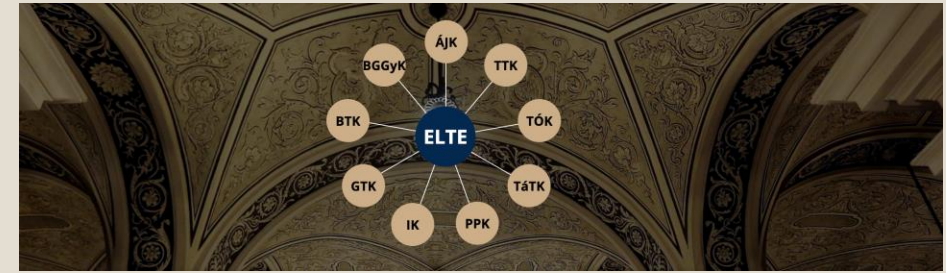

A collaborative Masters Program with the contribution of several Faculties and disciplines.

It offers research specialisations from diverse fields of scientific research:

Cognitive neuroscience – acoustic processes: **Ferenc Honbolygó**, *Memory and Hippocampus*: **Attila Keresztes**, *Mentalization processes*: **Balint Forgacs**, *spatial cognition, time perception*: **Zoltán Nádasdy**

Comparative Ethology - lead by **Ádám Miklósi**, **József Topál**, **Attila Andics**

Experimental Psychology – *Numerical Cognition*: **Attila Krajcsi**; and *Social Minds Research groups*: **Ildikó Király**, and many more

Human Electrophysiology Group

Zoltán Nádasdy –

nadasdy.zoltan@ppk.elte.hu

- Studying the role of **oscillations** in perceptual processes using **EEG**
- Visual consciousness
- Development of **spatial cognition** and its relationship to the theory of mind
- **Time perception** and cognitive representation of time

Stationary and mobile EEG, VR environments

Social Minds Research Group + Baby Lab

<http://babalabor.hu>

PEOPLE

Dr. Ildikó Király
lab leader

Dr. Bálint Forgács
research fellow

Dr. Márton Nagy
adjunct lecturer

Dr. Katalin Oláh
researcher, adjunct
lecturer

Dr. Hanna Marno
associate professor

Rebeka Zsoldos
PhD student

Schvajda Réka
PhD Student

Alexandra Kelemen
PhD student

Krisztina András
PhD candidate / lab
manager

TOPICS

- social cognition and episodic memory + interactions of different cognitive functions
- studying both children and adults

◦ **THEORY OF MIND**

- Spontaneous processes in perspective taking
- How do we update belief representations?
- Do we compute the beliefs of in-group and out-group members in a different way?

◦ **NAÏVE SOCIOLOGY**

- What cues do young children use to sort the social world into categories?
- What kind of inferences does group membership warrant for them?

◦ **EPISODIC MEMORY**

- Conscious and unconscious processes in relational retrieval
- Eye-movements as a measure of relational retrieval
- Episodic updating of belief representations
- Episodic memory in young children

Language and Brain Research Group

Bálint Forgács

Department of Cognitive Psychology
<https://sites.google.com/view/balint-forgacs>
forgacs.balint@ppk.elte.hu

1. Language and mentalization in infancy
2. Neuroscience of metaphors

Hippocampal Circuit and Code for Cognition Lab - Attila Keresztes

- Studying the hippocampus across the lifespan
- Age-related changes in pattern separation via domain specific pathways in the MTL? (Zsuzsan Nemecz)
- Neural underpinnings of Memory Ontogeny – the NeMO study (Hunor Kis)

ELKH | Eötvös Loránd
Research Network

 Eötvös Loránd University
Faculty of Education and Psychology

HCCCL

Learning, memory, and consolidation processes underlying habit-like behaviors

Research interest

Typical and atypical development of implicit and explicit learning processes

The effect of non-invasive brain stimulation (TMS, tACS, tDCS) on implicit statistical learning

Statistical learning in Tourette's syndrome

Sleep, learning, and memory

Functional brain connectivity during statistical learning

Investigating learning by ERPs

BRAIN, MEMORY AND LANGUAGE LAB

Eötvös Loránd University & Eötvös Loránd Research Network
Budapest, Hungary

Our research

The main focus of our cognitive neuroscience research team is to investigate learning, memory, and consolidation processes underlying habit-like behaviors. Our studies benefit from the approach of lifespan development and neuropsychology.

Lab Members

Lab Directors

Dezso NEMETH

Full Professor

Principal Investigator

Karolina JANACSEK

Associate Professor

Co-director

Mathematical cognition research group

Attila Krajcsi - krajcsi.attila@ppk.elte.hu

<https://www.thenumberworks.org/>

Numerical cognition - How do people understand numbers?

Methodological works and data analysis

Automatic statistical analysis software

<https://www.cogstat.org/>

EMIND - Integrative Neuropsychology Research group – Renata Cserjesi

Cognitive vs. Emotional flexibility
Art therapy induced mood and flexibility
Emotional biases in aging
Motor-Cognition-Emotion interactions
Cognitive-Affective training in Post Covid

ELTE Institute of Psychology Research groups

Behavioural Science Lab

Sleep & Cognition lab - The heterogeneity of REM sleep, the neurophysiology of Nightmare Disorder

Cognitive abilities & Individual differences lab – executive functions and their measurement method

**Human Interaction Research Group
& Adaptation Research Group** – hypnosis research, effect of suggestive communication

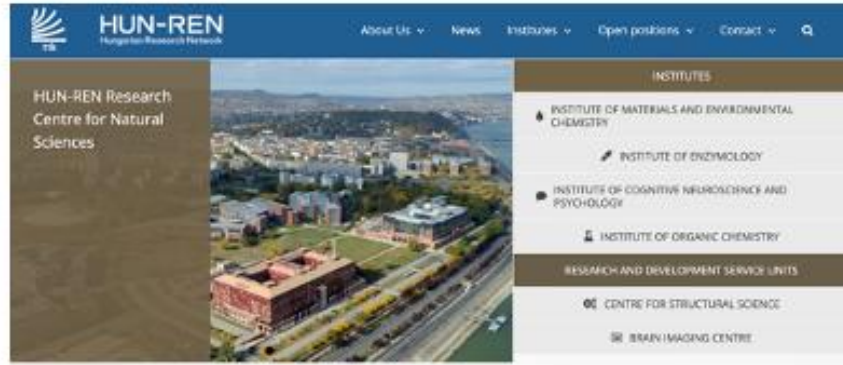

MTA
Centre
of Excellence

Eötvös Loránd University
Faculty of Education and Psychology

Research Group of Neurocognitive Development, Hungarian Academy Sciences

Ferenc Honbolygó - honbolygo.ferenc@ttk.mta.hu

Maria Ioanna
Zavogianni

Fülöp Flóra

Kertész Csaba

Nagy Sándor

Maria Noboa

Investigating the neurocognitive mechanisms of *speech perception, reading, music, implicit learning and cognitive control in adults, children and infants*, with a special focus on clinical and developmental aspects, using the latest techniques of brain imaging (EEG, fMRI).

Neuroethology of Communication Lab

ELTE TTK Department of Ethology

Attila Andics (attila.andics@gmail.com)

Lágymányos Campus, Southern Building 6.205/a

We investigate the evolution of social-communicative capacities using ethological and comparative cognitive neuroscientific methods (EEG, fMRI, fNIRS).

Vision Lab

Center for Cognitive Computation
Department of Cognitive Science

PROJECT TOPICS

Experimental projects:

- How does our mind construct **internal representations of the 3D visual world based on 2D retinal input**?
- How are **higher level abstractions built automatically from sensory input** and how they influence subsequent knowledge acquisition?
- How does **active learning operate as captured by eye movements**?
- How is information from **different modalities** (audition, vision) combined during these processes?
- Measuring human **cue combination** with **continuous psychophysics**
- Combining **VR** and motor behavior to explore **active learning**

Also, there are more **computational projects** (math skills are needed):

Automating doubly Bayesian inference using probabilistic programming languages (inferences about inference algorithms)

Developing a theory of representation learning by simulating the effect of inductive biases

Inventory

..... Any questions?
